WHAT IS CONCRETE-PRINT SURFACING?

Printed concrete (or pattern imprinted concrete) is a decorative paving method where freshly laid concrete is coloured, textured, and imprinted with specialist moulds to mimic the appearance of natural materials. A beautifully finished surface that is both practical and visually impressive, perfect for homes, gardens, and commercial environments.

HOW OUR PRINTED CONCRETE IS BUILT

PRINTED CONCRETE SURFACE

A strong, seamless concrete finish that's patterned, coloured, and sealed for long-lasting beauty and durability.

PROTECTIVE MEMBRANE LAYER

A thin barrier that helps control moisture and adds extra protection against movement and cracking.

SOLID MOT SUB-BASE

A deep, compacted foundation that supports weight, improves drainage, and keeps everything stable for years to come.

PREPARED GROUND (SOIL)

Carefully excavated and compacted to create a firm, reliable base

CONCRETE PRINT INSTALLATION PROCESS

1. Site Preparation & Sub-Base

We clear the area, remove any existing surface, and excavate to the required depth to create a solid base. A strong sub-base is laid and compacted to provide stability and prevent movement over time.

2. Formwork & Edging

Edges and forms are installed to shape the area and ensure a precise, clean finish.

3. Concrete Pouring, Colour & Pattern Stamping

High-quality concrete is poured, levelled, and prepared for the printing process. Colour hardener is applied, followed by imprinting the chosen pattern to create the decorative finish.

4. Acid Wash

The surface is carefully cleaned to remove residue and prepare it for sealing, ensuring a consistent final finish.

5. Sealing & Finishing

Once cured, the surface is sealed to enhance colour, protect against wear, and ensure long-lasting durability.

Important Notice

Concrete print is a labour-intensive process and highly weather dependent. A clear, dry day is required for sealing. Please note, the surface must not be driven on until it has been fully sealed.

A multi-level garden with wooden retaining walls, gravel paths, and various plants. The garden is built on a slope, with each level separated by a dark metal edging. The top level has a brick wall and a wooden railing. The middle level has a wooden planter box with purple and green plants. The bottom level has a gravel path and a large green plant. The overall scene is a well-maintained outdoor space.

LANDSCAPING

“

I would highly recommend this company on their high quality of work, which they did on my new off-street driveway. Faye kept me updated on all aspects of their work while I was on holiday abroad. The guys, which were on site carrying out the work, were prompt on the *two days* work and made sure it was kept tidy and clutter free. Well done to the whole team at Hall Surfacing Ltd.
